## PASO 1 Intro

- ◆ This guide will outline how to prepare and pack down your Original Prusa Enclosure for return or repair using the packing material we supplied with it.

ⓘ Be sure to read each step carefully! Colors on the Hexagon bullet points correspond to markers in the photos.

- ◆ If you do not have the original packing material and are providing your own please use the guide Embalaje de la caja para su devolución - Material de embalaje Personalizado.

## PASO 2 Before you get started

**i** Before you start packing it down, get out your phone or camera and take pictures of the Enclosure before and during the packing process.

**◆** Make sure the Serial Number sticker is present in the place indicated. If it is not present, please contact support right away.

**PASO 3** Original packing material

◆ Here we will outline the required packing material:

◆ Plastic foil

◆ Fragile sticker - Can be downloaded [here](#).

◆ Packing tape

ⓘ In addition to this, you need the original box and padding material.

## PASO 4 What needs to be packed

- Four clear PETG sheets (to be packed in their own thin box that you received with the enclosure).
- Pack all the fasteners and additional parts of the enclosure in a sealed and secured envelope or in a smaller cardboard box that will fit within the Enclosure box.

## PASO 5 What needs to be packed Part 2

- There are two different sizes of these profiles
  - 51cm / 20 inches
  - 56cm / 22 inches

## PASO 6 Packing layer by layer - First layer

- Place the padding for the steel black sheets at the bottom of the box and insert the thin foam sheet in the foam casing.
  - Place the bottom and top sides of the enclosure on top of the thin foam sheet and make sure it fits into the foam casing.
  - Add a thin piece of protective layer between the metal sheets to prevent scratches - paper or one sheet of bubble wrap would be ideal.
- ⚠ Be sure not to include the PETG clear sheets in this box as they will be packed in a separate box later.**

## PASO 7 Packing layer by layer - Second layer

- Place the cardboard sheet on top and add the padding foam to the sides of the box
- Place the Enclosure profiles into the foam padding **one at a time**. Make sure these fit and that you have placed the correctly sized profile in each assigned slit in the padding.
  - 2x short profiles (51cm/20 inches).
  - 2x long profiles (56cm/22 inches).
- Repeat the process of placing the profiles in the foam casing for the second layer of two long profiles and two short profiles.

## PASO 8 Packing layer by layer - Small metal parts

- Still on the second layer, pack the smaller metal parts and profiles to the sides of the box
- Place them into the padding as positioned in the photo.

## PASO 9 Packing layer by layer - Third layer

- Add the third and last level of the profiles into the padding after the smaller components are safely packed.
  - 4x Short profiles (51cm/20 inches)
- Place the larger thin foam sheet on the top.

## PASO 10 Final packing

- Pack the plastic parts and accessories in the cardboard box.
- Pack the four clear PETG sheets in the thin cardboard box. This cardboard box will be placed on top of the box with the profiles.
- Place the three boxes in the main cardboard box.

## PASO 11 Sealing the box

- (i)** Before sealing the box make sure you have documented the packing process, sent it to our shipping department, and received approval!
- ⚠** **Damage that occurs to unapproved shipments is liable to be covered to the sender.**
- ◆** Cierra la caja y pégala con cinta adhesiva como en la imagen.
- ◆** Envuelve la caja con rollo de plástico (film transparente) para hacerla más resistente y protegerla de cualquier daño causado por el agua.
- ◆** Coloca la etiqueta "Frágil" en al menos dos lados de la caja.

## Embalaje de la caja para su devolución - Material de embalaje Original

---

### PASO 12 All done!

- That is all for the packing process! Proceed with emailing our shipping department, providing pictures of the packing process and the service list.
- i** You can contact the shipping department by either replying to their initial email or just emailing [info@prusa3d.com](mailto:info@prusa3d.com).
- Once the packing process has been approved, you will receive a shipping label for the return.
